Illinois EMSC has developed a user friendly Windows-based software application that can assist hospitals to monitor credentials and continuing education for physicians, nurses and mid-level practitioners. It was specifically designed to help maintain records of continuing education related to pediatric emergency/critical care, a requirement of the pediatric facility recognition program. This application can also assist with monitoring trauma hours if your facility is a trauma center, as well as record credentials and continuing education for other internal/external requirements that your facility may have.

For further information about this resource or for any questions regarding the pediatric facility recognition program or requirements, please contact Evelyn Lyons at Evelyn.Lyons@illinois.gov.
