Older Population (Aged 70 & Above)

As our population ages, an evaluation of motor vehicle incidents involving the elderly is of increasing interest.

Older adults aged 70 and above were involved in 26,467 (9.3%) of all 285,468 crashes that occurred in Illinois in 2013 as drivers, passengers, or non-occupants of vehicles such as pedestrians and pedalcyclists. They represent 132 (13.3%) of all 991 traffic fatalities in Illinois in 2013. Just 5.5% of drivers in all crashes were older adults, but 9.2% of drivers in fatal crashes and 13.3% of fatally injured drivers were older adults.*

---

* Where driver age was known

Note: Data as of January 7, 2015; with 285,468 crash records, 532,753 vehicle records and 676,984 person records.

The law regarding the reporting threshold for Property Damage Only crashes was amended effective January 1, 2009, resulting in decreased reporting of crashes in this specific category. It did not affect the reporting of injury or fatal crashes. For details of the reporting amendment, see also [http://app.idph.state.il.us/emsrpt/crash.asp](http://app.idph.state.il.us/emsrpt/crash.asp).

Funding and development of this fact sheet was provided by: Illinois Department of Transportation and Illinois EMSC (a collaborative program between the Illinois Department of Public Health and Loyola University Medical Center). April 2015
Vulnerability

- Among adults, percent fatalities for drivers, passengers and pedestrians all followed similar trends, with percent fatalities increasing as age advanced†

- Overall, older adults who were involved in crashes in Illinois in 2013 in any capacity (driver, passenger or non-occupant) were 2.7 times more likely to be fatally injured than people aged 16 to 69†

![Percentage of Crash Victims Who Were Fatally Injured, by Victim Type & Age Group]

Seat Belt Use

- 21,258 (88.8%)‡ of all 23,947 older drivers of passenger cars/light trucks§ reported using seat belts
  - In comparison, 339,312 (86.4%) of all 392,933 younger drivers (aged 16 to 69) of passenger cars/light trucks reported using seat belts

- 5,183 (91.5%)‡ of all 5,665 older passengers of passenger cars/light trucks§ reported using seat belts
  - In comparison, 71,497 (86.5%) of all 82,701 younger passengers (aged 16 to 69) of passenger cars/light trucks reported using seat belts

† Where age was known
‡ Percent using seat belts was defined as the number of people for whom seat belt use was reported divided by the total number of people involved in crashes.
§ Passenger cars and light trucks for this analysis were defined as passenger cars, pickup trucks, vans, minivans and SUV’s according to classifications used by the National Highway Traffic Safety Administration.
Older Drivers

Driving errors and other actions taken by older drivers aged 70 and above before and during crashes tend to be different than those taken by younger drivers.

- Older drivers who were involved in crashes were 1.6 times more likely than younger drivers to have made driving errors such as those shown at right.
  - Together, these errors account for 25.5% of older drivers' actions during crashes.

- Older drivers who were involved in crashes were also 1.7 times more likely than other drivers to have been making a left turn prior to the crash, whether or not it was classified by police as an improper turn.

- 13,510 (51.0%) of all 26,467 crashes involving older drivers were intersection-related, compared with 94,295 (36.4%) of all 259,001 crashes in which no older driver was involved.
- Just 1,906 (7.2%) of all 26,467 crashes involving older drivers were speeding-related, compared with 31,332 (12.1%) of all 259,001 crashes in which no older driver was involved.
- By collision type, 3,284 (12.4%) of all 26,467 crashes involving older drivers were single vehicle crashes, compared with 62,998 (24.3%) of all 259,001 crashes in which no older driver was involved.

Demographic Facts**

- 14,038 (57.0%) of all 24,649 older drivers involved in crashes were male, compared with 237,758 (56.6%) of all 420,098 younger drivers.
- 1,591 (27.4%) of all 5,806 older passengers involved in crashes were male, compared with 63,708 (46.6%) of all 136,612 younger passengers.
- 132 (47.8%) of all 276 older pedestrians involved in crashes were male, compared with 2,461 (53.3%) of all 4,615 younger pedestrians.
- 50 (90.9%) of all 55 older pedalcyclists involved in crashes were male, compared with 2,576 (75.2%) of all 3,427 younger pedalcyclists.

** Where age and sex were known
Geographic Facts

- 20,665 (78.1%) of all 26,467 crashes involving older drivers took place on roads or highways that were classified as "urban" use, compared with 195,891 (75.6%) of all 259,001 other crashes.
- 11,394 (43.0%) of all 26,467 crashes involving older drivers took place in Cook County.
  - In comparison, Cook County accounts for 38.8% of the overall population of Illinois aged 70 and above\(^{††}\) and just 30.4% of the annual vehicle miles traveled in Illinois\(^{‡‡}\).

Time of Day

- 23,934 (90.4%) of all 26,467 crashes involving one or more older drivers occurred between 7:00 am and 7:00 pm.\(^{§§}\)
- In comparison, 190,986 (73.7%) of all 259,001 crashes involving no older drivers occurred between 7:00 am and 7:00 pm.\(^{§§}\)

- Overall, 26,467 (9.3%) of all 285,468 crashes that occurred in Illinois in 2013 involved one or more older drivers, but that rate varied by time of day.\(^{§§}\)
  - The highest involvement rate for older drivers was between 11:00 am and 12:00 pm, when 2,193 (16.6%) of all 13,193 crashes involved one or more older drivers.\(^{§§}\)
  - The lowest involvement rate for older drivers was between 2:00 am and 3:00 am, when 61 (1.4%) of all 4,388 crashes involved one or more older drivers.\(^{§§}\)
